

AI Time & Motion. Always Watching. Always Working.

Vision Intelligence delivers 24/7 automated time and motion insights using custom AI detectors and our powerful edge cameras—built for the factory floor.

Our Edge AI Camera

Plug-and-play edge device with on-device AI processing. Built for real-time industrial analytics—reliable, secure, and always on.

-  **24/7
Continuous
Monitoring**
-  **AI-Powered
Accuracy**
-  **Edge Processing
& Data Security**
-  **Actionable
Insights**

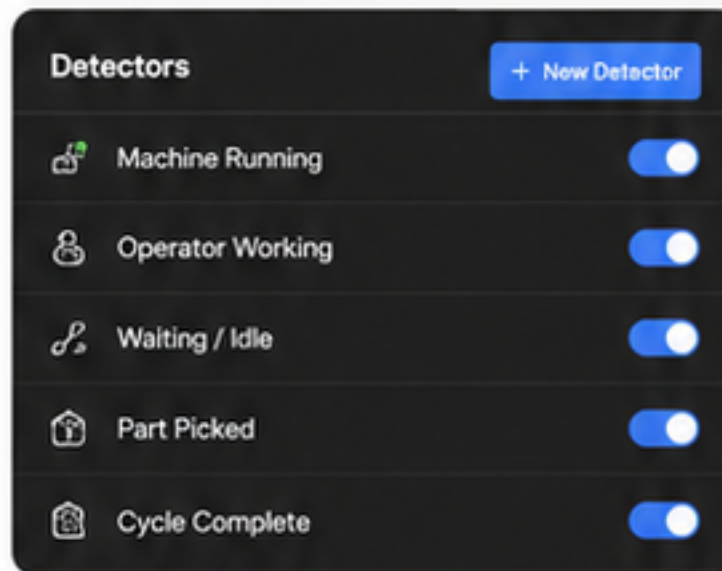

1 You Have a Production Question

Identify opportunities, bottlenecks, or process improvements you want to measure and understand.

- How much time is spent waiting at this station?
- What's our cycle time breakdown?
- How often is this machine idle?
- Where are our biggest losses?

2 You Create Detectors

Build custom AI detectors for the events, actions, and states that matter most to your operation.

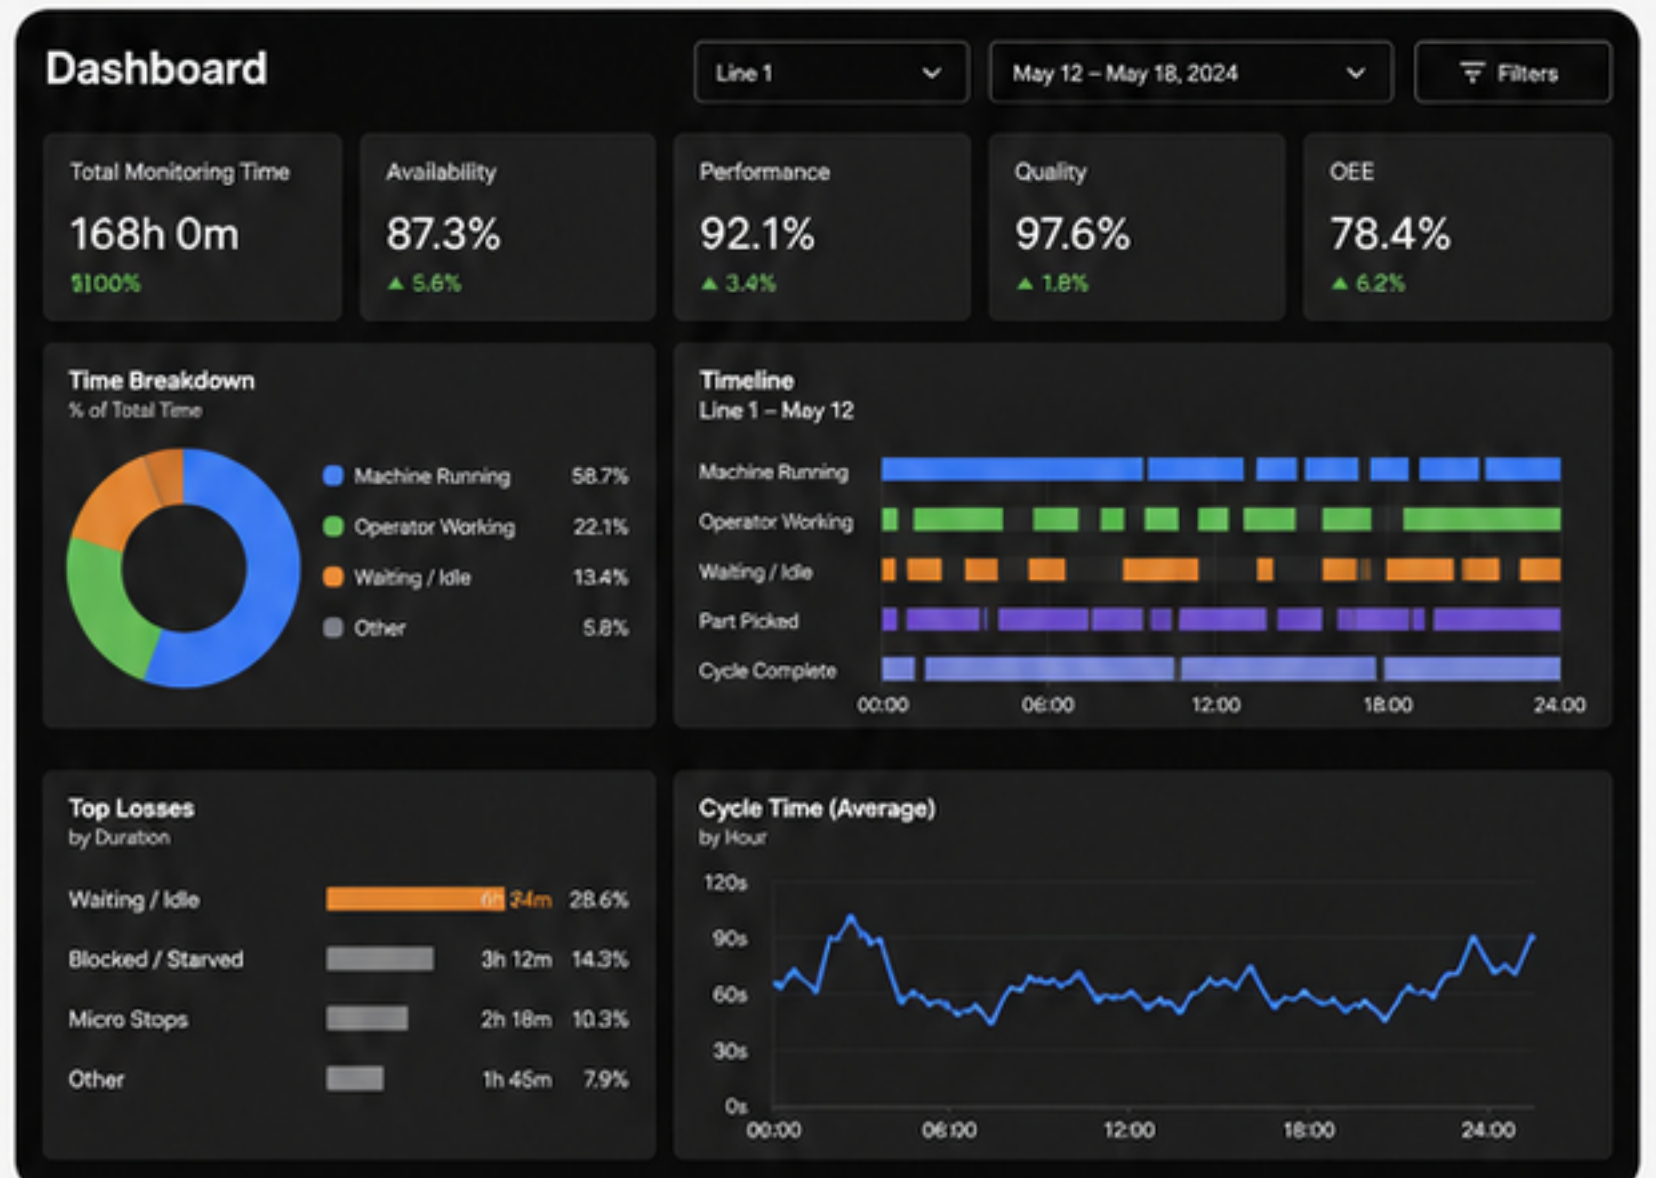

3 We Observe. You Get Answers.

Deploy our edge AI camera on the line. It observes 24/7 and delivers accurate time & motion data to your dashboard.

The Benefits of 24/7 Automated Time & Motion

-  **Always On. Always Capturing.**
No downtime. No sampling. Get a complete picture of your operations—day, night, and every shift.
-  **Uncover Hidden Losses**
Identify delays, idle time, and inefficiencies that are typically missed by manual methods.
-  **Improve Throughput & Productivity**
Use real data to eliminate bottlenecks and optimize every step of your process.
-  **Lower Costs**
Reduce manual observation, paperwork, and engineering time with automated insights.
-  **Secure. Private. Reliable.**
All processing happens on-device. Your data stays at the edge—secure and under your control.

Real Insights. Real Time. All the Time.

Vision Intelligence Edge AI Cameras + Custom Detectors + Powerful Dashboards = Smarter Operations.
